We provide emergency and permanent starting solutions

### Panorama Tours customer spotlight

Before Panorama Tours tried the supercapacitor starting module on their tour buses, they tested it first. After draining the battery to 17.5 volts by leaving on all the lights and blowers, the bus was able to start with no problem, as if it had a full battery. Within minutes, the KSM supercapacitor was back at full power, ready to start the bus again. By installing these starting modules on their motor coaches, Panorama never has to worry about dead battery no starts again.

### KSM

#### Everything you need to eliminate downtime from dead batteries

- Effective regardless of the state of charge of the battery—even “dead” ones
- Cranks the engine every-time you start, not just when the batteries are dead
- Supplements battery life
- Weight 10 – 15.65 kg
- Units available in 12 or 24 volt
